

BAKER STREET BEHAVIORAL HEALTH:

Providing Psychology, Psychiatry, Medication Management - including Genetic Testing, and Neuropsych services. Now accepting patients with no waitlist for children, adolescents, adults and families.

As a multi-discipline, and multi-location mental health practice, we pride ourselves as a valued and trusted referral partner for medical, legal, athletic, and educational entities throughout the United States.

Along with our offices in NJ, we provide telehealth and virtual sessions to patients across the USA.

SPECIALTIES INCLUDE

Neuropsychological Evaluations

Our neuropsychologists are experts in assessing how neurological conditions affect a patient's behavior, mood and thinking skills. Through diagnostic testing we can evaluate cognitive functioning to provide an accurate diagnosis and to recommend an appropriate treatment plan.

Psychiatry & Medication Management Services

We know that taking medication is a very personal choice. Baker Street Behavioral Health provides skilled practitioners with expertise in maximizing the benefits of medication and minimizing the possibility of side effects. We offer genetic testing to guide medication recommendations. Our prescribers can work collaboratively with you to help you choose in what situations you might want to use medication and if and when you might want to go off medication.

Autism Services

Our therapists are equipped to assess and treat individuals who present with autism and symptoms associated with mental illness, including: anxiety, depression, OCD, and psychosis. Our collaborative team of behavioral therapists and psychotherapists have a specialized understanding of the diagnosis and treatment of individuals and families who are affected by autism.

WHY ARE NEUROPSYCHOLOGICAL EVALUATIONS SO IMPORTANT?

Receiving an accurate diagnosis improves outcomes in school, at work, and in social environments. The results of a neuropsychological evaluation can ensure access to the educational assistance, therapy, medication and behavioral management strategies needed to be successful in daily life.

TESTING & DIAGNOSIS FOR:

- Learning Disabilities
- Attention Deficit Hyperactivity Disorder
- Autism Spectrum
- Non-verbal Learning Disability
- Gifted Assessments
- Specialized Testing
